
Etail Systems Tip Sheet

Objective: To add multiple SKUs to a product via a CSV file.

The following tells you how to achieve this;-

Firstly, you need one full line of data in a CSV file (please ask for 'Adding your products (via CSV)' & 'Adding filters to your products (via CSV)' if you need to know how to do this).

Once you have this, you can simply copy & paste it onto the next row, & change the following:

- ClientSKURef (unique SKU reference)
- ProductSKUAttributes (the attributes, if any, associated with that SKU e.g. Size Small)
- GTIN/ASIN/EAN (this should be unique to each different size/colour etc combination)
- eBay & Amazon GTIN (if applicable)
- Selling Price (this can be the same or different)
- eBay & Amazon prices (if applicable)
- SKUStatusID (e.g. if you want to suspend a SKU but not the whole product)
- eBayStatus & AmazonStatus

If you need any help adding multiple SKUs, please call 0844 482 0908 or email support@etailsystems.com.
